Profile Summary

Aspiring Software Engineer and AI & ML enthusiast with a strong foundation in Python, Full-Stack Development, and AI-powered application building. Currently pursuing B.Tech in Artificial Intelligence & Machine Learning at CGC University. Actively building real-world products — including CampusX (a college event platform) and an AI-powered Smart Attendance System. Passionate about using AI tools to move fast, ship clean code, and solve real problems end-to-end.

Education

Bachelor of Technology — Artificial Intelligence & Machine Learning | CGC University, Mohali | 2024 – 2028 | Pursuing

Higher Secondary Education (Class XII) | 2024 | 68%

Secondary Education (Class X) | 2022 | 71%

Projects

CampusX — College Event Connect, Discover & Participate App | [Live Preview \(Expo\)](#)

- Built a full-stack mobile application for college students to discover, create, and RSVP to campus events — covering end-to-end event workflows.
- Implemented RSVP and attendee management systems, event discovery feeds, user authentication, and profile flows.
- Built and deployed on both Android and iOS using Expo (React Native), with live OTA updates.

Tech Stack: React Native, Expo, JavaScript, REST APIs, Supabase / Firebase

Smart Attendance Management System — AI Face Recognition | [GitHub](#)

- Developed an AI-powered attendance system using Python and facial recognition (OpenCV & face_recognition library) to automate real-time attendance tracking for students and employees.
- Implemented a database-backed logging system that records attendance with timestamps automatically, eliminating manual processes.
- Applied computer vision techniques for accurate face detection and recognition under varied lighting conditions.

Tech Stack: Python, OpenCV, face_recognition, MySQL

Employee Management System | [GitHub](#)

- Built a full CRUD employee management system with a clean interface for adding, updating, viewing, and deleting employee records.
- Implemented role-based data management with database integration, form validation, and a structured menu-driven workflow.

Tech Stack: Python, MySQL / File Handling

Skills

Languages & Frameworks: Python, JavaScript, C++, Java, React Native, HTML/CSS

Backend & Databases: Flask, REST APIs, MySQL, PostgreSQL, Supabase, Firebase

AI & Tools: OpenCV, face_recognition, Claude Code, Cursor, GitHub Copilot, ChatGPT

DevOps & Platforms: Git, GitHub, Expo (Android & iOS), Vercel

Soft Skills: Ownership, Problem Solving, Communication, Fast Learning, Teamwork
